Homework #4

Jason Chiarulli

ENGR 108

Matlab for Engineers, Third Edition

Problem 6.5

```matlab
% a)
function output = mass(n,MW)
% Calculates the mass given two vector inputs,
% the number of moles and the molecular weight
[MW,n] = meshgrid(MW,n);
output = n.*MW;
end
```

Not enough input arguments.

Error in mass (line 14)
[MW,n] = meshgrid(MW,n);
